

Qumulo Data Migration Services

Overview & Benefits

Qumulo's data migration service provides you with the proven methodologies, solutions, and people you need to migrate your data. Each engagement is tailored to suit the individual customer's requirements, budget, and timeline.

Qumulo has proven experience migrating data from legacy systems onto QF2 storage systems. We know how to avoid unnecessary delays and complications. Our aim is to get you up and running as quickly as possible. To make sure you're comfortable with our approach, we will create a custom SOW that fully describes your data migration project.

Qumulo will always try to use any tools that you already have to reduce costs. For example, instead of having a Qumulo consultant on site, we can remotely schedule and monitor the data migration jobs, which reduces costs for labor and professional services.

Services May Include

- Data discovery and migration planning
- Installation of data migration equipment and software
- Full data migration
- Cutover validation
- Removal of data migration equipment
- On-site Qumulo Advanced Training Services
