

Qumulo Systems Health Check

Overview & Benefits

Keeping up with changes to an IT environment is a constant challenge. Although your original deployment once met your needs, over time, industry changes, new business requirements, additional workloads, and new users all mean your deployment may not be performing optimally now.

As Qumulo continues to deliver additional features for QF2, a Qumulo systems health check can help ensure that your QF2 system is still properly implemented and deployed. Additionally, when you periodically evaluate the configuration, capacity, and performance of your QF2 system, you can be confident that you're getting the most value from your investment.

Services Include

- Collecting data and conducting an assessment of your QF2 system
- Identifying potential opportunities to optimize configuration and improve performance
- Presenting a report of findings and recommendations and planning the on-site implementation
- Completing an on-site engagement to share Qumulo's recommendations and perform implementation activities
- Delivering a final assessment with configuration details and an executive summary with findings, recommendations, and implementation results

Key Activities

Action	Responsibility
Kickoff call	All
Technical audit and analysis	Qumulo consultant
Operational analysis including consideration of business objectives	Qumulo consultant
On-site engagement planning	All
On-site implementation	All
Create assessment report	Qumulo consultant
