

Modern, high performance, cost-effective image storage solution for PACS and VNA

The challenge

In order to speed diagnosis, healthcare technologies continue to rapidly evolve. Advanced imaging systems, including digital modalities such as MRI, CT, and PET scans, are producing higher resolution images to enhance the accuracy of clinical decisions. As the number of these systems grow throughout each healthcare system, and the number of images being produced increases, imaging data is growing at an increasingly rapid rate. Hospitals and clinics are managing many more and much larger imaging studies, which need to be highly available across departments and remote facilities.

To meet these challenges, healthcare systems require a modern data storage solution that can provide fast reliable access, and that can support new imaging technologies, growing data requirements, and enable a path to cloud environments.

QUMULO FILE STORAGE FOR PACS

Unified fast access to speed workflows

The Qumulo file storage system is simple to deploy, manage, and scale. With Qumulo’s single namespace, healthcare organizations can unify access to the PACS imaging storage, as well as simplify and reduce the cost of data management. Accessible through NFS and SMB protocols, Qumulo’s file storage fits perfectly into healthcare environments and integrates with existing network clients.

Qumulo’s flash-first hybrid architecture and intelligent caching technology optimizes performance for healthcare organizations. Viewing stations across the healthcare system can count on extremely fast access to all imaging data with the speed of flash. While, the data that is not actively accessed, is moved to more economical hard disk drives (HDD).

Managing growth is simple. Expand and grow on-prem or in the cloud.

As healthcare data capacities continue to expand and grow, organizations can benefit from Qumulo enterprise-proven file storage, which employs a modular, scale-out file storage architecture. Qumulo’s software-defined design utilizes clusters of nodes made up of Qumulo hardware, or pre-qualified industry-standard hardware from HPE or Fujitsu.

Managing growth is simple. Just add nodes to the existing infrastructure to increase performance and capacity levels uniformly on-prem, or to multiple cloud environments, when required, with no disruption or downtime.

Reliable data assurance and protection for all medical imaging

This solution provides built-in data protection through local and remote snapshots and continuous replication, to ensure data is preserved and always available. In addition, at-rest and over-the-wire encryption ensure confidential records are secure. Working closely with key healthcare industry partners and PACS providers to deliver solutions that assure compliance with government and institutional data privacy and security regulations, meeting HIPAA regulations for compliance, including encryption and off-site copies.

Real-time analytics for data visibility and growth predictability

Qumulo provides built-in real-time analytics to provide insight across the entire file system, to enable storage administrators to easily monitor storage usage and performance trends. With this superior visibility, healthcare organizations can gain control, reduce overall operational and capital costs, by proactively managing current needs and better predicting future storage requirements.
