# Get the freedom to choose without compromise with Qumulo and Supermicro

With data growing rapidly, budgets tightening and rackspace in a datacenter at a premium, administrators often make the impossible choice between price, performance, and scale. Qumulo powered by Supermicro's hybrid server hardware brings customers the freedom to choose the performance and scale that meets the needs of their most advanced use cases with economics that meet their budgetary realities.

## Big Performance, Small Footprint

Qumulo powered by Supermicro gives you the scale and performance you need in an economical and environmentally friendly form factor. all-NVMe provides lightning fast reads and writes and unparalleled throughput to support your most advanced performance requirements. Optimizing for storage performance and trimming the unnecessary fat results in a highly economical platform

## Hybrid-NVMe for performance and economy

Qumulo and Supermicro's all-new hybrid-NVMe platform delivers greater performance efficiency with a single Supermicro deployment. No longer must you trade off economy for performance (or vice versa) or require multiple vendors to address both. Qumulo on new Supermicro hybrid-NVMe nodes deliver the performance you need while maintaining cost-efficiency at scale using intelligent caching technology that predictively moves data so that most reads and all writes are NVMe first for maximum speed where and when it's needed.

Qumulo's advanced distributed file system allows you to symmetrically scale capacity and performance. It provides real time data visibility and performance monitoring without the need to do frequent tree walks. Qumulo offers the most efficient file system in the industry, with the best raw-to-useable capacity that leverages 100 percent of useable storage.

## Built for the Hybrid Cloud

Qumulo's file system is built for the hybrid cloud, providing a single file solution whether your data is in the cloud or on-prem. Users can burst compute in Amazon Web Services, Microsoft Azure or Google Cloud and shift primary workloads to the cloud without application changes.

## Freedom to Choose

Qumulo is designed with platform flexibility in mind. Qumulo customers can drive down costs through a broad choice of hardware at different performance levels. Our software architecture runs on standard hardware provided by Supermicro and other partners. The ability to mix node manufactures such as the new Supermicro nodes with older hardware in a cluster allow Qumulo customers to get the most out of their infrastructure investment while taking advantage of the latest hardware enhancements.
